

RWorksheet_Gallo#4b

Alfe Kevin P. Gallo

2023-11-08

#1 . Using the for loop, create an R script that will display a 5x5 matrix as shown in Figure 1. It must

```
vectorA <- c(1,2,3,4,5)
matrixA <- matrix(vectorA, nrow = 5, ncol = 5)
```

```
vectorA <- c(0)
matrixA <- matrix(0, nrow = 5, ncol = 5)

for (i in length(vectorA)) {
  matrixA[i, ] <- abs(vectorA - vectorA[i])
}
print(matrixA)
```

```
##      [,1] [,2] [,3] [,4] [,5]
## [1,]    0    0    0    0    0
## [2,]    0    0    0    0    0
## [3,]    0    0    0    0    0
## [4,]    0    0    0    0    0
## [5,]    4    3    2    1    0
```

#2 Print the string "" using for() function. The output should be the same as shown in Figure*

```
for(i in 1:5 ){
  newstar <- rep("*", i)
  print(newstar)
}
```

```
## [1] "*"
## [1] "*" "*"
## [1] "*" "*" "*"
## [1] "*" "*" "*" "*"
## [1] "*" "*" "*" "*" "*"
```

#3 Get an input from the user to print the Fibonacci sequence starting from the 1st input up to 500. Use

```
yournum <- as.integer(readline("Enter the starting Fibonacci sequence number: "))
```

```
## Enter the starting Fibonacci sequence number:
```

```
if(is.na(yournum || yournum < 0)) {
  cat("Enter something else")
} else {
```

```
inputnum <- yournum
a <- inputnum
b <- 0
```

```
cat("Fibonacci sequence starting from", inputnum, ":\n")
```

```
repeat {  
  num <- a + b  
  if (num > 500){  
    break  
  }  
  cat(num, " ")  
  a <- b  
  b <- num  
}
```

```
cat("\n")  
}
```

```
## Enter something else
```

```
#4 Import the dataset as shown in Figure 1 you have created previously
```

```
#4a. What is the R script for importing an excel or a csv file? Display the first 6 rows of the dataset?
```

```
ShoeSdata <- read.csv("Shoe_Sizes")
```

```
#4b . Create a subset for gender(female and male). How many observations are there in Male? How about in Female?
```

```
MaleSub <- subset(ShoeSdata, Gender == "M")  
FemaleSub <- subset(ShoeSdata, Gender == "F")
```

```
cat("The number of observation in male subset:", nrow(MaleSub), "\n")
```

```
## The number of observation in male subset: 14
```

```
cat("The number of observation in female subset:", nrow(FemaleSub), "\n")
```

```
## The number of observation in female subset: 14
```

```
#4c Create a graph for the number of males and females for Household Data. Use plot(), chart type = bar
```

```
GenderRibil <- table(ShoeSdata$Gender)
```

```
barplot(GenderRibil,  
  main = "Number of Males and Females in Household Data",  
  xlab = "Gender",  
  ylab = "Count",  
  col = c("blue", "pink"),  
  legend.text = c("Male", "Female"))
```

Number of Males and Females in Household Data

#5 a. Create a piechart that will include labels in percentage. Add some colors and title of the chart.

```
Dela_Cruz_Fam <- c(60,10,5,25)
pie(Dela_Cruz_Fam, labels = paste0(Dela_Cruz_Fam, "%"),
    main = "Expenses of Dela Cruz Family",
    col = rainbow(length(Dela_Cruz_Fam)))

legend("topright", legend = c("Food", "Electricity", "Saving", "Miscellaneous"),
    fill = rainbow(length(Dela_Cruz_Fam)))
```

Expenses of Dela Cruz Family

#6 Use the iris dataset

#6a a. Check for the structure of the dataset using the str() function. Describe what you have seen in the output.

```
data(iris)
str(iris)
```

```
## 'data.frame':    150 obs. of  5 variables:
## $ Sepal.Length: num  5.1 4.9 4.7 4.6 5 5.4 4.6 5 4.4 4.9 ...
## $ Sepal.Width : num   3.5 3 3.2 3.1 3.6 3.9 3.4 3.4 2.9 3.1 ...
## $ Petal.Length: num   1.4 1.4 1.3 1.5 1.4 1.7 1.4 1.5 1.4 1.5 ...
## $ Petal.Width : num   0.2 0.2 0.2 0.2 0.2 0.4 0.3 0.2 0.2 0.1 ...
## $ Species      : Factor w/ 3 levels "setosa","versicolor",...: 1 1 1 1 1 1 1 1 1 1 ...
```

I saw a data frame of 5 variables which include the numeric measurements for Sepal.Length, Sepal.Width, Petal.Length, Petal.Width, and Species.

#6b. Create an R object that will contain the mean of the sepal.length, sepal.width, petal.length, and petal.width.

```
data(iris)

iris_mean <- colMeans(iris[, 1:4])

iris_mean
```

```
## Sepal.Length Sepal.Width Petal.Length Petal.Width
##      5.843333      3.057333      3.758000      1.199333
```

#6c. Create a pie chart for the Species distribution. Add title, legends, and colors. Write the R script.

```
data(iris)

species <- table(iris$Species)

pie(species, labels = names(species),
    col = rainbow(length(species)),
    main = "Species Distribution")

legend("topright", legend = names(species),
    fill = rainbow(length(species)), title = "Species")
```

#6d. Subset the species into setosa, versicolor, and virginica. Write the R scripts and show the last 6 rows of each species

```
data(iris)
```

```
setosa_sub <- subset(iris, Species == "setosa")
versicolor_sub <- subset(iris, Species == "versicolor")
virginica_sub <- subset(iris, Species == "virginica")
```

#to display the last 6 rows of each species

```
tail(setosa_sub)
```

```
##      Sepal.Length Sepal.Width Petal.Length Petal.Width Species
## 45           5.1         3.8         1.9         0.4   setosa
## 46           4.8         3.0         1.4         0.3   setosa
## 47           5.1         3.8         1.6         0.2   setosa
## 48           4.6         3.2         1.4         0.2   setosa
## 49           5.3         3.7         1.5         0.2   setosa

## 150           5.9         3.0         5.1         1.8 virginica
```

#6e. Create a scatterplot of the sepal.length and sepal.width using the different species(setosa,versicolor,virginica)

```
data(iris)
```

```
iris$Species <- as.factor(iris$Species)
```

```
colors <- c("setosa" = "#66c2a5", "versicolor" = "#fc8d62", "virginica" = "#8da0cb")
symbols <- c("setosa" = 16, "versicolor" = 17, "virginica" = 18)
```

```
plot(iris$Sepal.Length, iris$Sepal.Width,
     col = colors[iris$Species],
     pch = symbols[iris$Species],
     main = "Iris Dataset",
     sub = "Sepal Width and Length",
     xlab = "Sepal Length",
     ylab = "Sepal Width")
```

```
legend("topright", legend = levels(iris$Species), col = colors, pch = symbols, title = "Species")
```

#6e
#by factoring the species, it will be represents as a categories in R.

```
#7.
library(readxl)

alexa <- read_excel("alexa_file.xlsx")
